

PROJECT REPORT

TALENT VIEW HR DASHBOARD

BY: Gagana R

Executive Summary:

This project showcases an HR Analytics Dashboard built in Power BI to analyze workforce composition, employee attrition, and hiring trends. The dashboard provides key HR metrics such as headcount, attrition rate, retention rate, tenure, and compensation, enabling data-driven decision-making. It identifies high-attrition departments and roles, highlights that voluntary attrition is the primary contributor, and shows that factors beyond salary influence employee exits. The dashboard also tracks hiring growth and new hire demographics, supporting effective workforce planning and retention strategies.

Purpose:

The purpose of this project is to analyze and visualize HR data using Power BI to understand workforce structure, identify attrition drivers, and evaluate hiring trends, enabling data-driven HR decisions to improve employee retention and workforce planning.

The dashboard consolidates key HR metrics such as total employees, active workforce, attrition rate, retention rate, average tenure, and average monthly income, providing a clear snapshot of the organization's overall workforce health. Workforce analysis reveals a predominantly 26–35 age group, indicating a young and mid-career employee base, with balanced representation across departments and regions.

This project focuses on building an end-to-end HR Analytics Dashboard using Power BI to analyze workforce composition, employee attrition, compensation trends, and hiring patterns. The dashboard is designed to support data-driven HR decision-making by providing clear insights into employee demographics, attrition drivers, retention challenges, and recruitment effectiveness.

The solution is structured into three interactive report pages:

1. HR Workforce Overview
2. Employee Attrition Insights
3. New Hire Insights

Each page addresses a specific business question while allowing users to filter data by department, job role, gender, education, and geography.

Business Problem Statement:

Organizations often struggle to:

Understand why employees leave and which segments are most affected.

Track attrition trends across departments, job roles, and education levels.

Evaluate whether compensation and hikes influence attrition.

Identify high-performing hiring channels and profiles.

Monitor workforce diversity and demographic balance.

Tools & Technologies:

Power BI Desktop – Data modelling and visualization.

DAX – Measures and Calculated KPIs

Power Query – Data cleaning and transformation.

Excel/CSV – Source data format.

Data Used:

Employee demographics (age, gender, marital status, education)

Employment details (department, job role, tenure)

Compensation data (monthly income, hike percentage)

Attrition details (status, reason, year of leaving)

Hiring details (joining year, age group, education)

Geographic information (province)

The data spans multiple years, enabling trend and comparative analysis.

Key Metrics/ KPI's:

Total Employees: 13,423.

Active Employees: 10,225.

Attrition Count: 3,198.

Attrition Rate: 23.82%.

Retention Rate: 76.18%.

Average Tenure: 3 years.

Average Monthly Income: \$6,339.

Dashboard Pages & Insights:

1.1 HR Workforce Overview :

This page provides a high-level snapshot of the organization.

Key Visuals & Insights:

Employee Headcount by Department: Workforce is fairly balanced across departments, with Corporate Functions and Sales having the highest headcount.

Workforce by Age Group & Gender: Majority of employees fall in the 26–35 age group, indicating a young and mid-career workforce.

Geographical Distribution: Employees are spread across multiple provinces, supporting regional workforce planning.

Hike Distribution by Job Role: Senior roles receive higher maximum hikes, while entry-level roles have lower and more consistent increments.

Average Monthly Income by Department: Corporate Functions and Sales show slightly higher average salaries compared to HR and Product.

Marital Status Distribution: Majority of employees are married, followed by single and divorced.

Business Value: Helps HR understand workforce structure, pay equity, and demographic balance.

1.2 Employee Attrition Insights:

This page dives deep into employee exits and their underlying causes.

Key Visuals & Insights:

Attrition by Department: Corporate Functions show the highest attrition rate.

Attrition by Education: Employees with Diploma and Doctorate levels show higher attrition compared to Bachelor's and Master's degrees.

Attrition by Job Role: Sales Development Representatives and certain administrative roles face higher attrition.

Attrition Trend by Year: Attrition decreased significantly in 2020 but increased again post-2021.

Voluntary vs Involuntary Attrition: Voluntary attrition (17.75%) is significantly higher than involuntary (6.07%).

Top Reasons for Leaving: Retiring, medical issues, better compensation offers, long working hours, and relocation.

Attrition vs Pay Analysis: Roles with relatively high pay still show high attrition, indicating that salary alone is not the only driver.

Attrition & Tenure: Employees with lower tenure (around 2–3 years) are more likely to leave.

Business Value: Enables HR teams to target high-risk roles and departments and design focused retention strategies.

1.3 New Hire Insights:

This page focuses on recruitment and hiring effectiveness.

Key Visuals & Insights:

New Hire % by Joining Year: Hiring increased steadily from 2019 to 2022, showing organizational growth.

New Hire by Department: Product and Sales departments have the highest new hiring percentages.

New Hire by Age Group: Majority of new hires belong to the 26–35 age group, aligning with workforce trends.

New Hire by Education: Doctorate and Diploma holders represent a significant portion of new hires.

Top New Hire Job Role: Product Coordinator stands out as the most hired role.

Business Value: Helps recruitment teams evaluate hiring strategies and optimize talent acquisition.

Business Insights and Recommendations:

1. Focus retention efforts on Corporate Functions and Sales roles.
2. Improve employee engagement for early-tenure employees.
3. Address non-monetary attrition drivers such as workload, career growth, and flexibility.
4. Review compensation and growth paths for high-attrition job roles.
5. Strengthen onboarding and mentorship programs for new hires.

Conclusion:

This HR Analytics Dashboard provides a comprehensive, interactive view of workforce dynamics, attrition behavior, and hiring trends. By integrating multiple HR dimensions into a single solution, the dashboard empowers HR leaders to move from reactive reporting to proactive, insight-driven workforce management. The project demonstrates strong capabilities in data modeling, DAX calculations, storytelling through visuals, and business-oriented analytics, making it a valuable addition to any HR analytics or data analyst portfolio.

Future Enhancements:

1. Predictive attrition modeling.
2. Employee performance and engagement analysis.
3. Department-wise retention forecasting.
4. Integration with real-time HR systems.
